

Path Too Far Outside In

Pelvis Rotation, Side Tilt & Sway

Possible Causes

Rib Cage

Wrist & Hands

Lead Arm

Early and too much turning, backward sway and losing the tilt ALL cause the ribcage to engage too early.

Check to see if right shoulder is turning outward, too high in the downswing

Lead Wrist has gone into "extension" prior to Impact and the Hand Path is working inward too early.

Lead Arm has worked off, and coming across, the chest.
